Technical Skills

Programming & Frameworks
Python, NodeJs, ReactJs, C, Django, Flask, REST APIs, OOP

Databases
PostgreSQL, SQLite, MongoDB

Data & AI
SQL, Scikit-learn, supervised learning, classification, feature engineering, NLP, LLMs & Transformers, Data Processing, Power BI (DAX, Fabric), Plotly, Pandas, NumPy

Development & Collaboration Tools
Git, GitHub, GitLab, Microsoft Azure, ArgoCD, Grafana, ClickUp, Trello

Operating Systems & Virtualization
Windows / Linux installation, virtual machines

Strengths

Adaptability

Flexibility

Soraya Codo

Data Engineer | ML engineer

Available immediately for a permanent position.
AI & Data Management Master's graduate designing end-to-end Machine Learning and Generative AI solutions, from data preparation to deployment. My background as a Python backend developer brings a strong grounding in security, software quality and production-grade engineering. Experienced in NLP, LLMs, RAG, feature engineering, data analysis and data pipeline design.

Professional Experience

Data Engineer
From Sept. 2025 to Oct. 2026 Slb (Schlumberger) Montpellier, France

- Developed a regression model predicting data liberation times between Techlog and OSDU with a mean error of 41 seconds, enabling engineers to anticipate when data will be available for their business analyses.
- Built and maintained data pipelines for industrial data used at international scale.
- Designed Power BI dashboards used daily by 5+ managers and business teams to track application adoption, user activity and the performance of 3 services, supporting technical investigations and incident resolution.
- Implemented monitoring and observability strategies with Grafana and ArgoCD across 8 deployment environments, strengthening proactive incident detection and service reliability.
  Tech stack: Python, OSDU, Techlog, Ocean Plugin, PowerBI, Grafana, Microsoft Azure, Insomnia, ArgoCD, aiohttp

Python Backend Developer
From Apr. 2023 to Sept. 2023 GéoDigital Cotonou, LI, Benin

- Designed and developed Django backends for business applications used to manage day-to-day operations.
- Implemented an access management system to strengthen user security.
- Developed asynchronous tasks to automate business processes.
- Configured the deployment environment with Nginx.
  Tech stack: Django, ReactJs, Postman, Gitlab, Nginx

Python Backend Developer
From Oct. 2022 to Mar. 2023 Fasfox

- Structured and centralized 20M+ records to improve their usability.
- Improved data reliability and accessibility for operations teams.
- Developed an event-management REST API to automate internal workflows on each feature release.
  Tech stack: Django, Flask, Gitlab, Webhooks

AI & Data Projects

Gambling-Related Spending Prediction
Predictive model estimating gambling-related spending from behavioral and socio-economic data.

Human Rights RAG Chatbot
RAG system enabling natural-language querying of legal documents using LangChain, Hugging Face and ChromaDB.

Energy Consumption Prediction
Built a predictive model of household energy consumption; feature engineering, hyperparameter tuning and performance evaluation.

Education

Master's in Artificial Intelligence & Data Management
Since Sept. 2024 Nexa Digital School

Bachelor in Computer Science
From 2020 to 2023 Epitech Technology

Certifications

Software Quality Engineering
2026 Université Laval
Applying software development best practices (TDD, maintainability, security…)

Business Mathematics
2024 Université Laval
Applying mathematical concepts to real-world business cases
